Continuation of 5. does NOT place the application in condition for allowance because: in regards to applicant's argument that the Hambright reference is not considered an image product, the examiner submits, that one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. In this case Manico et al is relied upon for disclosing an image product having a first and second suport substrate with a first and second separate image layer, wherein the suppor substrates are secured with each other to form a dual-sided integral composite image product. Hambricht is only relied upon for showin an image product having a plurality of fold lines. Therefore, it would have bee obvious to one having ordinary skill in the art to modify Manico's image product to include a plurality of fold lines as taught by Hambright for the purpose of providing a panoramic display of images. Furthermore, in response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., folder.. having any image formed thereon) is not recited in the rejected claims. Although the claims are interpreted in light of the specification, limitations form the specification are not read into the claims. (see In re Van Geuns, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993)). Claim 1, in particular discloses a "support substrate (holder) having a separate image layer thereon (sheet having indicia). Nowhere in the rejected claims does it state that the "image layer is formed on the support substrate". Note, applicant must further disclose in detail what an "image product" is.
